OPENING PANDORA'S BOX: WHEN DNA FINDS UNEXPECTED, IMPROPER ANCESTORS

Speaker: **James Baker, PhD, CG**

Come learn about how DNA results can be used to identify family adoptions and other Non-Paternity Events. These events may occur at any point in one's genealogical tree, and sometimes may cause major surprises for DNA users. A case study is presented in which a well-researched and well-established tree was turned upside down by DNA results back in the 4th generation.

A popular returning speaker, **James Baker** holds a PhD in sociology and has taught at both the UC and CS University systems. He has been seriously involved in the field of genealogy research for the last 16 years. Baker is retired from a career in the aerospace industry and now writes for the acclaimed newsletter of the Sacramento German Genealogy Society. Jim currently volunteers as a specialist at the Sacramento FamilySearch Library.
